

MANGESH DARKE

San Francisco, CA ◇ (510)·598-5607 ◇ mangeshdarke@gmail.com ◇ [mange.sh/github](#) ◇ [mange.sh/linkedin](#) ◇ [mange.sh](#)

SKILLS

Languages	Python, Java, C, Swift, C++, Golang, SQL, HTML/CSS, Javascript
Databases	Firebase, MongoDB
Tools	Numpy, Pandas, Git, JUnit, Scikit, Sklearn, WebKit, Cocoa Touch, Docker, Vagrant

EXPERIENCE

GiveTeens20

Fremont, CA

Web Development Intern

Aug 2017 - Aug 2018

- Led a team of 4 interns in redesigning the organization's website to attract new interns and boost website traffic
- Designed wireframes in Adobe Illustrator to visualize interaction flow and design choices
- Implemented dynamic elements, embedded videos and content carousels, into the website using React.js and modularized existing codebase to improve future feature delivery
- Increased traffic to the website from potential interns, resulting in 30% gain in number of interns

Member of the Board and Chairman of the Student Advisory Council

Aug 2016 - Sep 2018

- Mentored high school students in technologies such as human-computer interaction, artificial intelligence, and data engineering by leading lab based workshops and guided exercises
- Facilitated monthly focus groups with our interns to collect data and gauge interest on prospective opportunities, reported collected data at quarterly board meetings
- Reallocated resources into technology focused initiatives providing tools and opportunities resulting in 50% increase in student volunteers

HIGHLIGHTED PROJECTS

Bear Maps

- Developed map routing application using Java web servers and Route Handler API for navigating Berkeley
- Integrated a JUnit test suite to replace our manual debugging process, thereby reducing our debugging time
- Employed test-driven development to design and implement core map routing functionality

CalNow

- Designed a calendar iOS application using UIKit and Foundation Kit from Cocoa Touch in XCode
- Populated NoSQL Firebase Realtime Database with JSON structured calendar events, from data collected using WebKit web scraper written in Swift
- Optimized event data refresh by establishing tiered based web scraping, reducing application load time
- Adopted by 25 users to serve as their main student events portal

PintOS

- Implemented system calls, a priority thread scheduler, and a fast file system to bare-bones version of PintOS in C
- Designed software architecture for feature implementation and leveraged technical design documentation to synchronize developer workflows

Spam/Ham

- Built email spam filter using Logistic Regression classifier in Python
- Utilized feature engineering and exploratory data analysis to extract features from email text data
- Used Sklearn libraries to process the dataset and fit the Logistic Regression model, validated model performance through cross validation and hyper-parameter tuning to achieve 94% accuracy
- Analyzed ROC curve to ensure our false positive and true positive rates were within acceptable bounds

EDUCATION

University of California, Berkeley

Aug 2018 - Dec 2020

Bachelor's of Arts in Computer Science

Chabot College

Aug 2016 - Jun 2018
